

## How To Delete a Patient Pathway

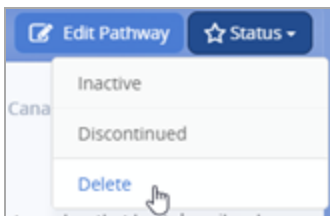

When you delete a Pathway from a patient, it is only removed from that patient and not all patients. The Pathway will still be available in Content>Pathways for Content Administrators to manage. Removing a Pathway from a patient means that the Pathway will no longer be sent to them during their monitoring program.

As a Care Team member, to delete a Pathway from a patient:

1. On the **Patients** page, click the patient with a Pathway you want to delete.

The Patient Profile page opens.

2. On the **Patient Profile** page, click the **Pathways** tab.
3. In the **Active** Patient Pathways list, click (to highlight) the Pathway you want to delete.
4. Click **Status**, and then click **Delete**.

A confirmation message appears.

5. Click **Delete**.

The Pathway is removed from the patient.
